Vehicle is not listed? please contact or look up vehicle on

Foot Note 1: Some vehicles may require certification for legal fitment of Airbag Man products, please check with regulatory authorities regarding this before purchase or fitment of Airbag Man products, please contact Airbag Man for further details, note this is generally only applicable to OA product and for Heavy vehicle product.

Foot Note 2: Airbag Man has made every attempt to assure that the air helper spring kits listed will properly fit. Chassis modifications made by others that effect suspension dimensions may not provide conditions for proper fit. Due to new model introductions and manufacturer changes, Airbag Man reserves the right to make changes to the list without notification.

Foot Note 3: Some manufacturers use brake proportioning valves to adjust braking force as a function of chassis to axle distance. If you modify your suspension it effects the function of this valve. We suggest that you check with your dealer on proper treatment of this device prior to installation of airbag kits.

Foot Note 4: Full Droop measurements are taken by jacking or lifting the vehicle so that the suspension with all components connected, is at its hanging limit, then measure the gap directly above the centre bolt, from the bottom of the chassis rail (or other nominated position) to the top of the axle or leaf, whichever is closer. Ensure the vehicle is jacked or lifted using suitable safe equipment, and using correct practices.

SHOWN ACTUAL SIZE WHEN PRINTED ON A4 PAPER

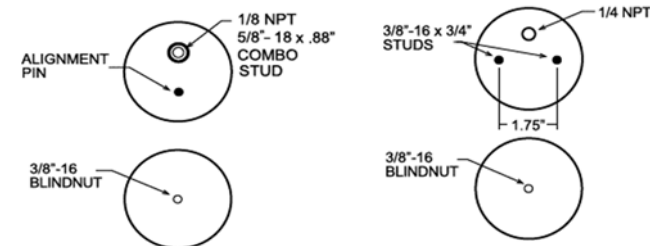

The scale shown below may be used to assist in identifying the correct NPT (National Standard Taper Pipe Thread) fitting. Thread sealant is applied to the tapered threads. If the fitting is removed, use Teflon tape during reinstallation to prevent air leaks.
